

RaCom — The Complete Assurance and Threat Analysis Toolbox

Built by engineers, for engineers.

Transsol has spent 30 years in asset management, safety engineering & assurance and security analysis — long enough to know exactly what's wrong with the tools our industry relies on.

They're **disconnected, dated and Windows-bound**. Eye-wateringly expensive — up front, then every year. And not one of them, alone or combined, can carry the whole assurance, security and asset management lifecycle.

Worse, they impose inflexible workflows: the same tasks repeated, the same data re-entered, nothing **talking** to anything else.

Even worse still is the fallback to spreadsheets — no control, no audit trail, no governance and no answer to **who deleted the hazards?**

We thought — there has to be a better way. And now there is.

So we built the toolbox we always wanted: **ten fully integrated, web-based applications** that do everything the other tools don't (and a whole lot more besides — much of which will genuinely surprise you). Tools that talk to each other where it matters; tools that share common data, so nothing has to be done more than once. Tools that have an added + that increased our own productivity many times over — and can now do the same for yours. Built from the ground up, by engineers for engineers: the toolbox we always wanted to **use**, not disparate tools we had to endure.

Implements the entire asset management, security and assurance lifecycle

Analyse · Optimise · Validate · Assure

Ten web-based applications in one integrated world

We built the + into every application, so you can add a + to your productivity.

Enterprise governance and audit with innovative and engaging user interfaces.

Web-based, transparently priced, with no annual maintenance fees.

Everything you could wish for — **without the pain, or the price-tag.**

Engineering assurance reimagined.

Tools to enhance engineering processes.

Price

- ✓ Hugely competitive — prices that will surprise, even astonish
- ✓ Flexible pricing — full suite or pick & mix
- ✓ 1, 5 or 10-user licences — no annual maintenance fee

Data Protection

- ✓ Hosted on a secure, cloud-based platform
- ✓ Or behind your own firewall, on your infrastructure, if you require it
- ✓ Your data stays protected — never shared, never exposed

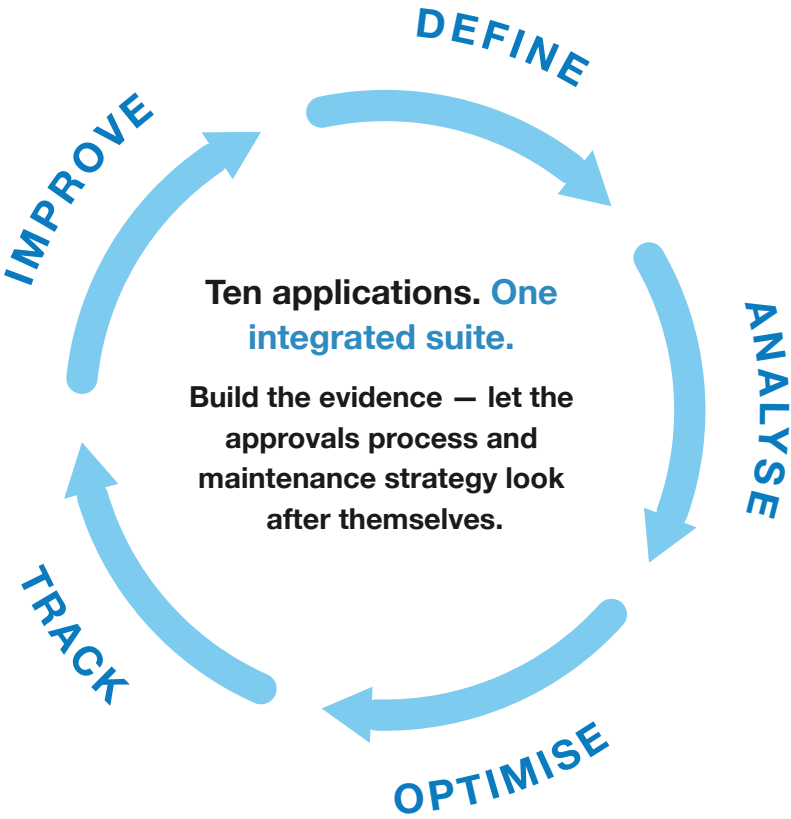

Built for Engineers

- ✓ Modern, intuitive user interfaces — a genuine pleasure to use
- ✓ Ten integrated applications — one source of truth
- ✓ Tools engineers want to use, not endure

RaCom doesn't just replace old tools — it transforms how your team works. Less time fighting software, more time delivering engineering value.

One integrated model: safety hazards and security threats flow into requirements, and validation evidence flows back.

This integrated model carries through to security and threat identification — a capability no other vendor offers.

DEFINE

BowTie+ and SecNet+ identify every hazard and threat; HazLog+ and SecLog+ hold the register — the complete safety and security picture.

ANALYSE

Hazards and threats write to ReqMan+. Safety threats also write to HazLog+. Safety requirements flow on into FTARBD+ — shared FTA and RBD.

OPTIMISE

A common FMECA is shared across FMECA+, FTARBD+, RelCen+ and RelDem+ to form the basis of analysis, measurement and optimising maintenance tasks.

TRACK

RelDem+ measures real reliability performance and feeds it back to RelCen+.

IMPROVE

The loop closes — stronger assurance, leaner maintenance, year on year.
